Maybe Thunderbolt 3 isn't a requirement for you and you just want your laptop to be future-proof. Either way, we've put together what we consider to be the best USB-C laptops available for purchase today. We have everything from beautifully designed, to those with all the power that makes each one one of the best Windows laptop options available. The latest XPS 13 Pick Dell staff are equipped with 10th-generation Intel processors, as well as two Thunderbolt 3 USB-C ports for ultra-fast file transfers and power supplies for external USB-C accessories such as eGPUs. This large convertible laptop is designed for people who are working on the go, need a touch screen, and a great input experience in a fine design. From \$1,149 in Dell featuring up to the 10th-generation Intel Core i7 processor, 32GB of RAM, GTX 1650 Ti Max graphics card, and 1TB SSD, this laptop should be able to do whatever you need. It also has three USB-C ports, with Thunderbolt 3 for quick file transfer, power and even external GPU support. From \$1,199 to the Dell Surface Book 3 is Microsoft's flagship laptop, featuring most of the bells and whistles you'd expect on a premium laptop. It rocks a 10th generation Intel Core i5 or i7 processor, up to 32GB of RAM, 2TB of memory, and a beautiful 4K display. It's still great for transferring files, however. From \$1,599 to Microsoft Store Staff pick Surface Laptop 3 13.5 is a worthy extension of last year's model. While there are no massive changes, the new Intel 10th Gen processor, Instant On, the faster solid-track drive (SSD), the Type-C 3.1 port and the huge trackpad are making it even better than ever. Battery life is good, and features like Wi-Fi 6 help add some future checks. Users can also save money and make DIY storage updates if they want to. From \$799 to the Microsoft Store While the outer Surface Pro 7 looks like last year's model (and a year earlier), the new 10th Gen Intel processor and Iris Plus graphics bring some serious horsepower to one of the coolest 2-in-1s around. The new USB Type-C port greatly expands its capabilities, and the transition to Intel for Wi-Fi goes a long way to perfecting this already large convertible. From the \$749 in the Microsoft Store featuring the 10th-generation Intel Core i7 processor, to 16GB of RAM, a 13.3-inch Full HD or 4K touchscreen display, and a GTX 1650 Max, this laptop was designed by gamers and built for a gamer who needs to get the job done too. It is equipped with a USB-C port powered by Thunderbolt, one USB-C 3.1 Gen 2 port and two USB ports Type-A. Attach an external GPU and you'll be way on your way to a good gaming session. From \$1,399 to Razer Surface Pro X is a redesign of the Pro Form Factor we know and love. Love, two USB-C ports and a new Microsoft S1 ARM processor inside. This is Microsoft's first ARM Surface with surface 2 in 2013, and it has super thin framing around the display for a more modern look. It also has fast charging and up to 13 hours of battery life on a single charge. From \$849 to the Microsoft Store If lightweight is your thing, the 2.5-pound (1.15 kg) LG Gram is for you. It comes with an 8th-generation Intel Core i7 processor, a 512GB SSD, a 17-inch 2K touchscreen display and integrated graphics. It has one USB-C 3.1 port that isn't Thunderbolt 3-enabled, so you can't use it for external graphics power, but it's still great for quick file transfer. \$1593 on Amazon If you're looking for something for your workplace, the Lenovo Yoga C940 is your best buy. With two USB-C ports, there's plenty of room for all your USB-C accessories. It's available in two colors, with 10th-generation Intel processors, a 14-inch 1080p or 4K display, and more. From \$999 to Lenovo If We Make Some Offers USB-C is a versatile USB port that works with a variety of external peripherals ranging from USB drives, external graphics processors, webcams, and more. There are different types of USB-C, but they all use the same connector. Not all USB-C ports support external GPUs, for example, as it requires Thunderbolt 3 powered by four PCIe bands, so make sure you choose the right one depending on what you need. If you absolutely need Thunderbolt 3 ports, you'll want to look at another list of laptops. If you want to take a gander only to generally large laptops, we have a list for that too. If you're looking for a USB-C enabled laptop that focuses on a design like the Surface Pro X, or something with all the power and all the ports like the Lenovo ThinkPad X1 Carbon, there's something for everyone in the world of USB-C laptops. I personally love the Surface Laptop 3 as it feels like everything around the best laptop you can get for a great price. It's super slim, with PORT USB-A and USB-C for versatility, and quick charging support, so you can stay recharged as a last resort. It also has a beautiful 13.5-inch or 15-inch display at a ratio of 3:2. We can earn commissions for purchases using our links. Learn more. Bowden is a senior editor at Windows Central. Bringing you exclusive coverage to the world of Windows 10 on PCs, tablets, phones and more. Also an avid collector of rare prototypes of Microsoft devices! Follow us on Twitter: @zacbowden. Previously we showed you how to create a Windows 10 USB media installation while performing a clean Windows 10 setup, but there may be a case where the only machine you have is available Mac. We'll show you to create a USB boot flash drive with a Windows 10 installer with a Mac. It's easier than you think thanks to the built-in boot Assistant from Apple. First, you need to download the Windows 10 ISO file. Go to the download page and select the right edition of Windows 10 in Menu. If you don't know what K, KN or Single Language means, just select Windows 10 on the list. Download Windows 10 ISO Create a USB installer with Boot Camp Assistant after downloading the ISO file, you will need to use Boot Camp Assistant to move it to a downloadable USB drive. Insert a USB flash drive on your Mac. Make sure it's at least 8GB, which is usually noted on a USB stick. You can also check the right USB drive on your desktop and by clicking Get Info. Check if the room is next to a capacity of at least 8GB. All files in the disk will be deleted, so make sure there are no important documents inside. Open Boot Camp Assistant. The easiest way to run it is through Spotlight Search, which you can bring up by clicking Command and Spacebar. Click Enter to run the app. Check the box for Windows 7 or later to install the drive and cull set Windows 7 or later. Click Continue to continue. Boot Camp Assistant automatically finds an ISO file from the download folder, but make sure it's the right file. Click Select... button and find the ISO file. Make sure the drive is the destination USB flash drive you inserted. Click Continue. It can take about 20 minutes to format and customize the USB installer on the Mac. When The Boot Camp Assistant is done, the USB drive will be renamed WININSTALL. Click Out to close the app and then remove the USB drive. That's it! You now have a USB boot with a Windows 10 installer. You can use it to customize the new Windows 10 PC from scratch. We told you it was easy! Have you tried to create a Windows 10 USB drive installer from Mac before? Have you encountered any problems? Let us know your experience in the comments! More than likely, the reason is that Windows has renamed the disk a letter that is already in use. This will happen if you have multiple card readers, flash drives or external hard drives attached. This will also happen if you are online and mapped discs. To find the drive and then rename it, you'll want the right click on my computer and select Control. From your computer control screen, select Disk Control. In this window you should see all your connected physical drives, their format if they are healthy, and drive the letter. In this case I'm going to change the email drive of my Lexar USB drive. Click the right button on the disk in the list, and from the resulting menu select Change Drive Letters and Paths... Click on the change so we can change the letter of the disk. You may notice that you can choose Add that will allow you drive to the folder if you want. We don't want to, so just click Change. Choose a new disk letter from the drop down list, preferably the one you normally use for that drive. Click Yes Yes Screen confirmation and you're done! If you have an automatic game enabled, you'll get a normal pop-up dialogue asking what you want to do. usb serial controller driver windows 10. usb 2.0 video capture controller driver windows 10. usb 3.0 extensible host controller driver windows 10. usb xhci compliant host controller driver windows 10. usb host controller driver windows 10. usb game controller driver windows 10. usb serial controller driver windows 10 free download. usb 3.0 host controller driver windows 10
